

TEAM PRODUCTIVITY VISUALIZATION DASHBOARD

VISUALIZATIONS FOR
EXECUTION ANALYSIS

Gantt Charts : Day (Execution Start) vs Test Case ID

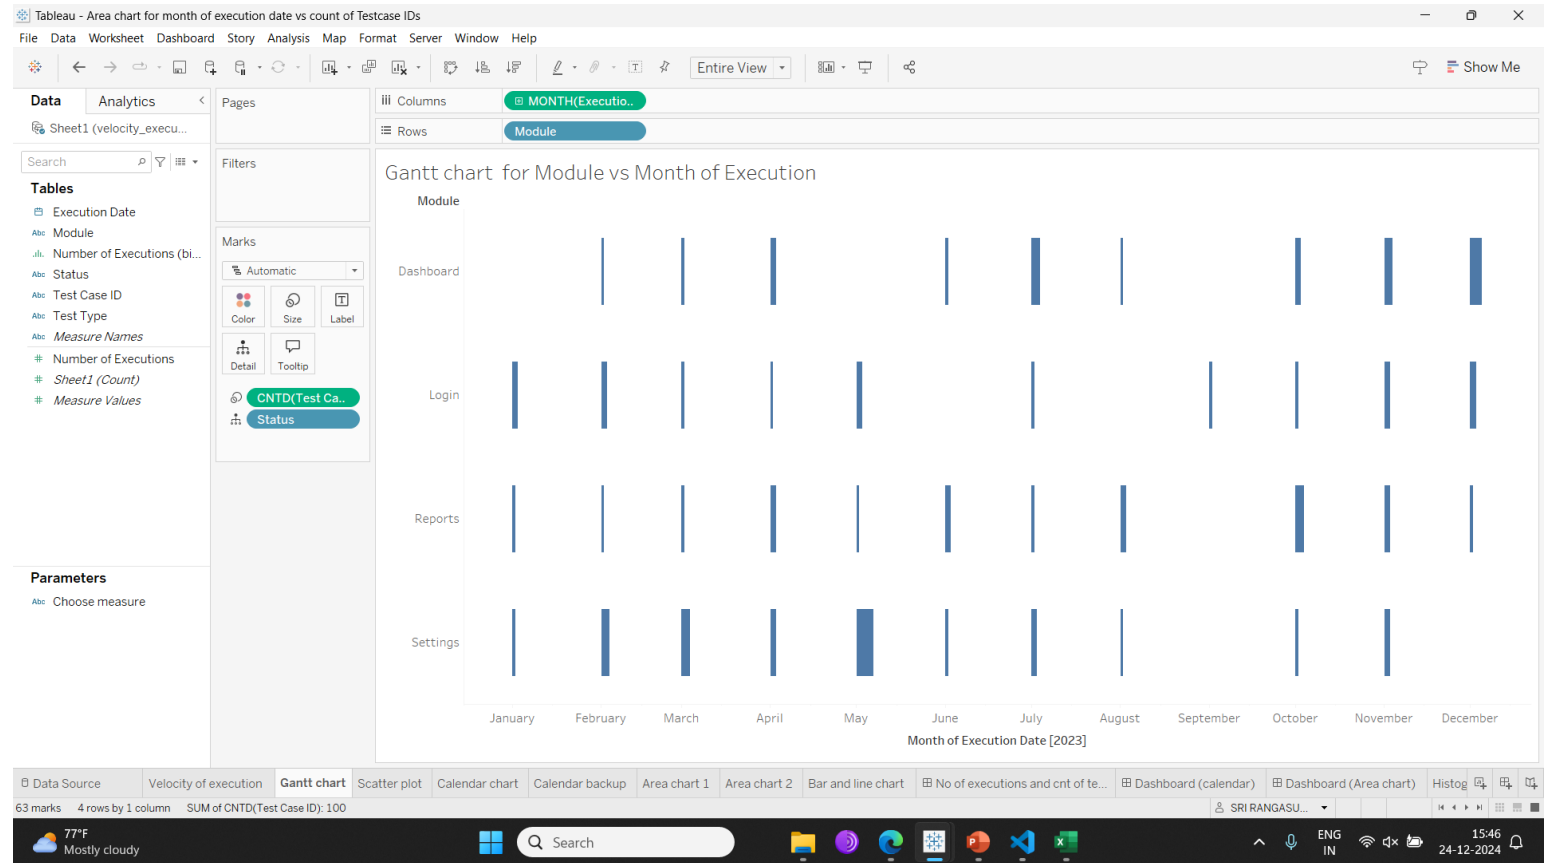

Gantt Charts : Day (Execution Start) vs Test Case ID

Insight: Shows when each test case was executed and their respective execution durations. The size and color encoding allow for easy detection of failed or delayed tests.

Link: [Gantt chart : Testing team | Tableau Public](#)

Gantt Charts : Month (Execution Start) vs Module

Gantt Charts : Month (Execution Start) vs Module

Insight: Highlights module-level activity trends over months. Modules with consistently high test counts might indicate critical areas of focus or potential overload.

Link : [Gantt chart for Module vs Month of Execution | Tableau Public](#)

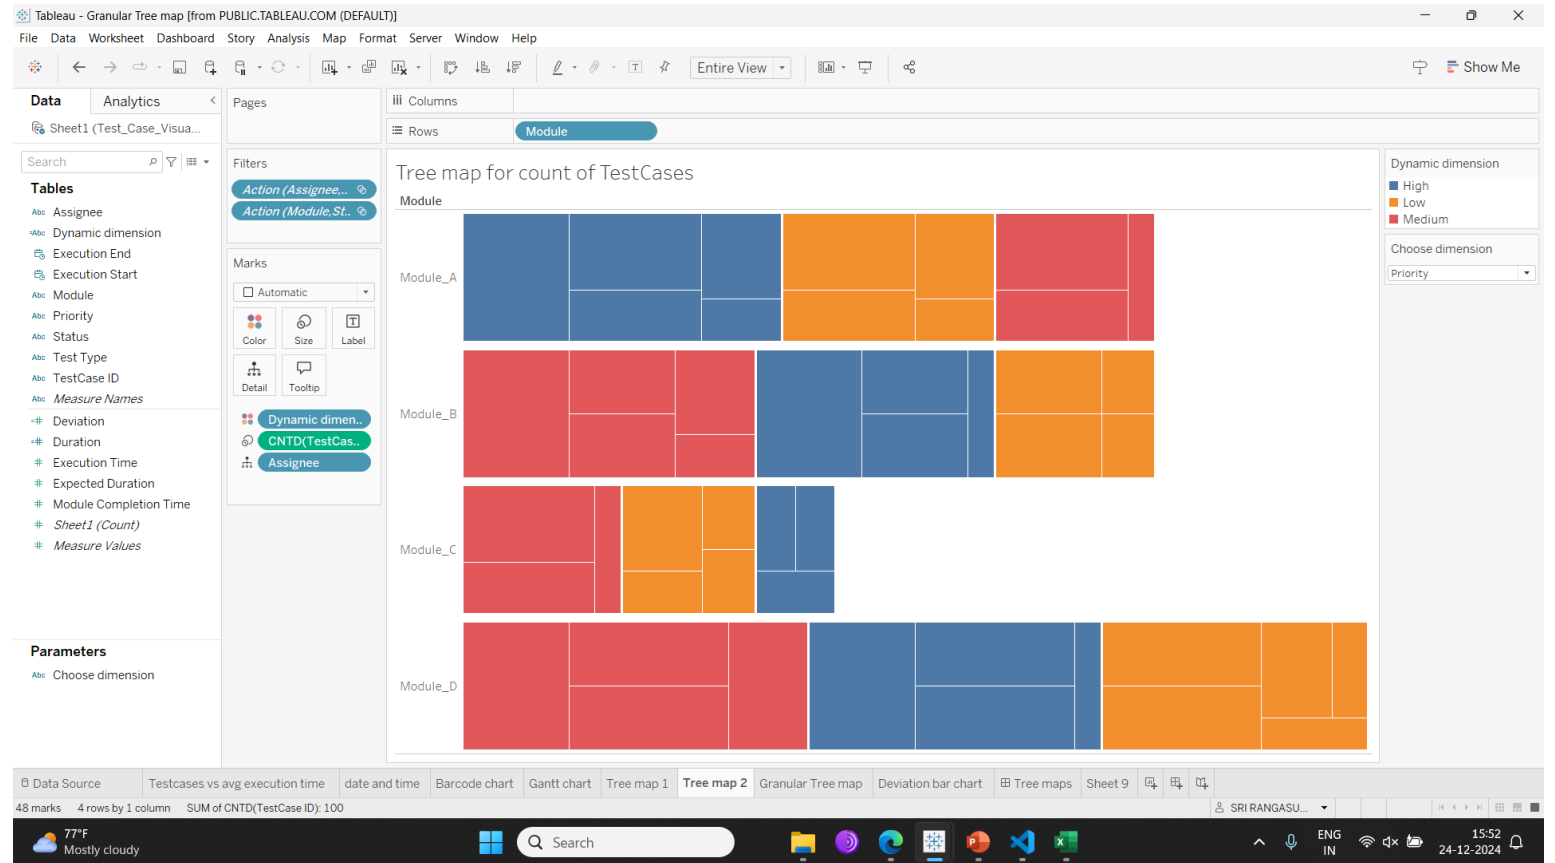

Tree map Charts : Module (Row), Avg Execution Time (Size), Assignees in Detail

Insight : Identifies modules with high execution times and correlates these with assignee workloads. Priority-based coloring highlights areas requiring immediate attention.

Link : [Tree map for Execution time \(mins\) | Tableau Public](#)

Tree map

Charts : Module (Row), Count of Test Case IDs (Size)

Tree map Charts : Module (Row), Count of Test Case IDs (Size)

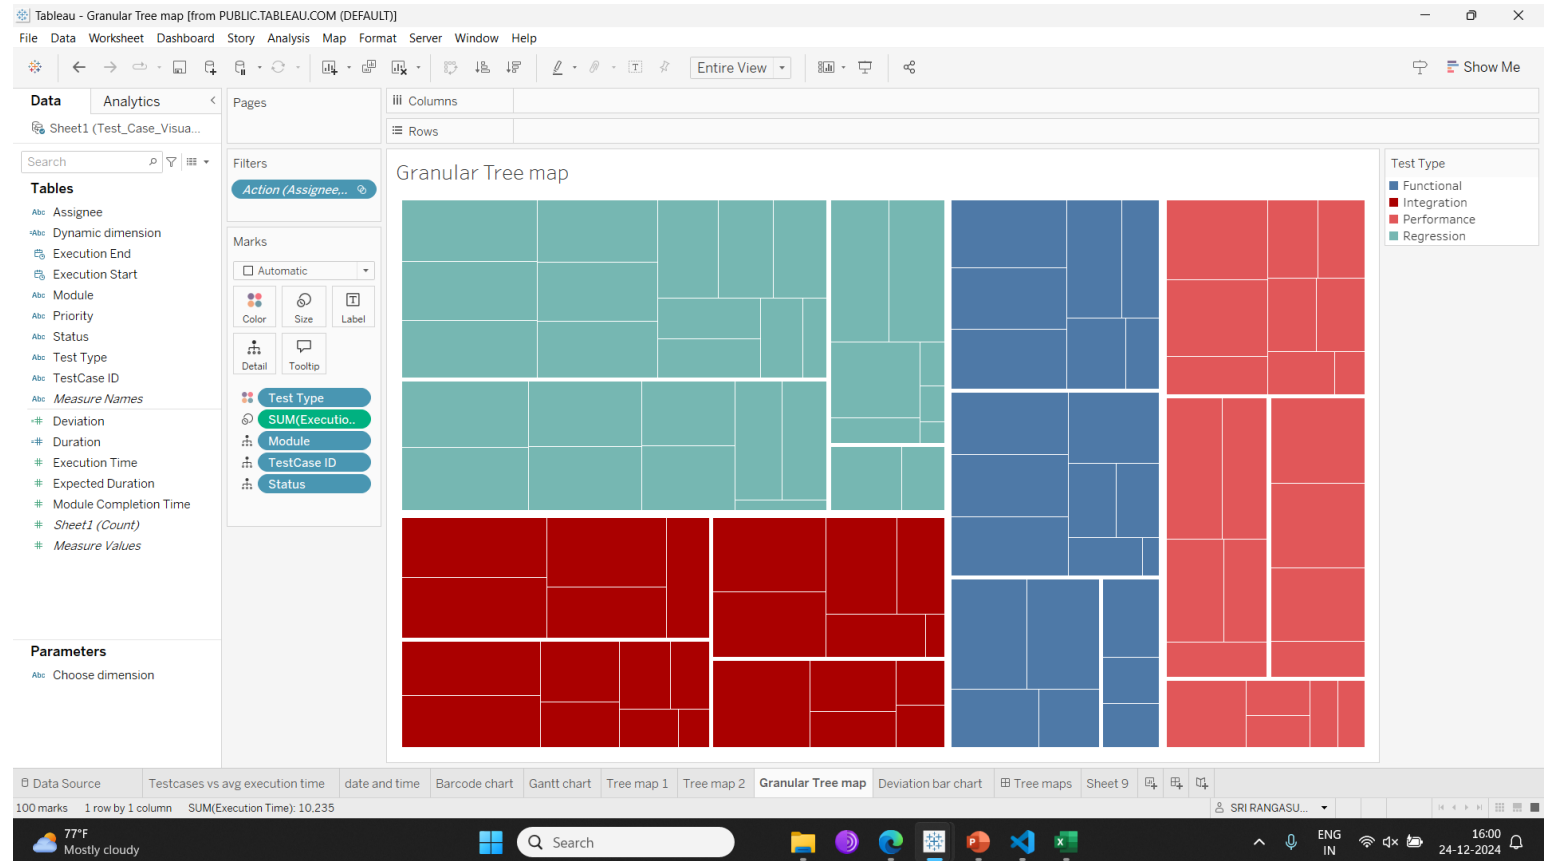

Insight: Reveals test case density across modules and their associated priorities or statuses. Provides insights into workload distribution and failure-prone modules.

Link : [Tree map for count of TestCases | Tableau Public](#)

Tree map

Charts :

Granular Tree map

Tree map Charts : Granular Tree map

Insight: A granular view of execution details, highlighting specific test cases within modules that contribute most to execution time.

Link : [Granular Tree map](#)
[| Tableau Public](#)

Scatter Plot for Test Case and Execution Analysis

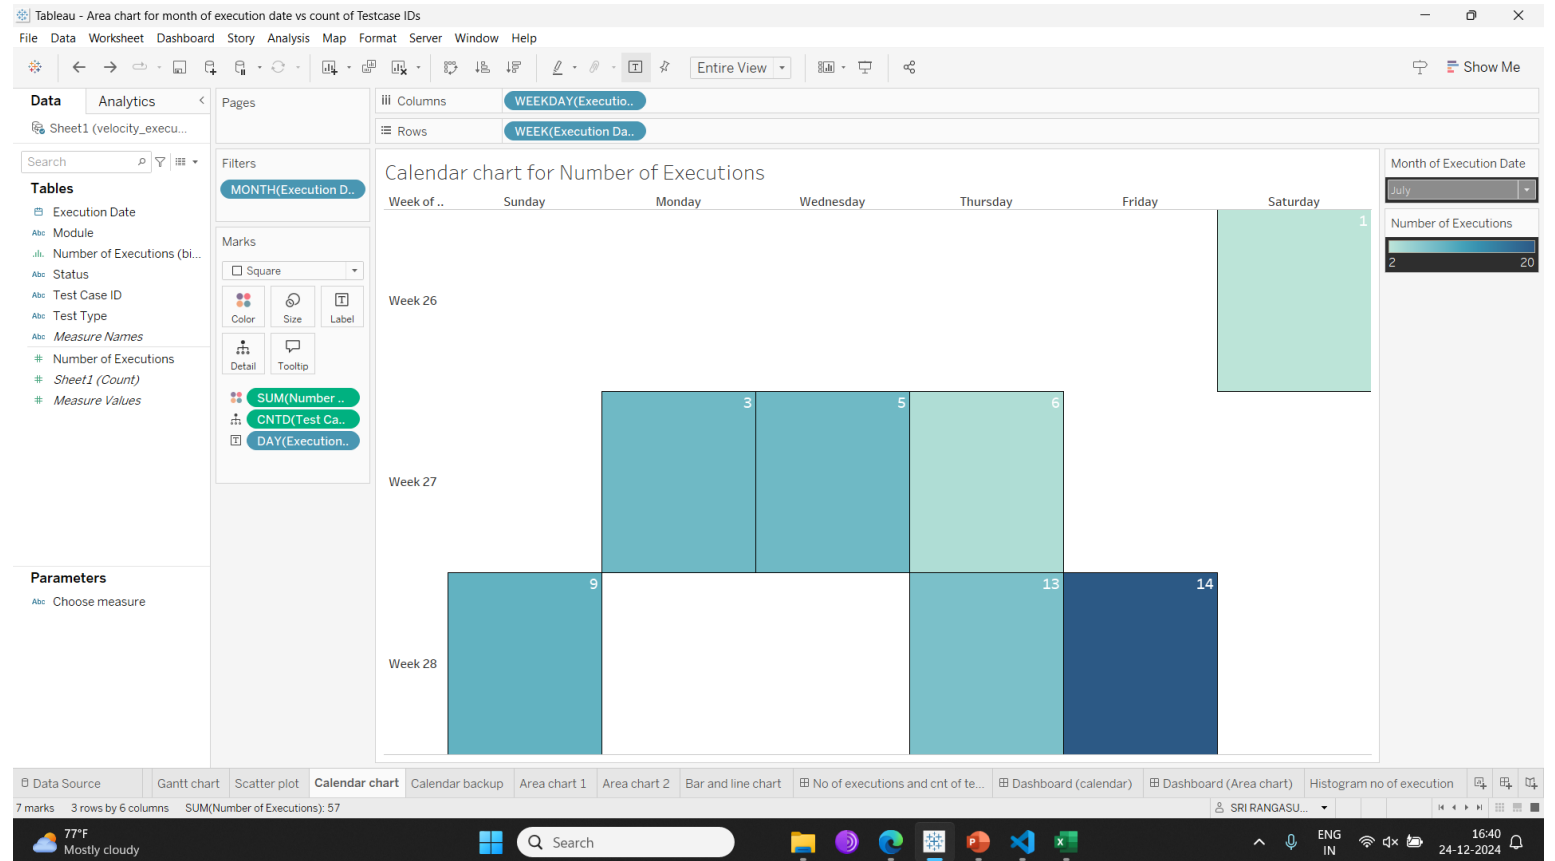

Scatter Plot for Test Case and Execution Analysis

Insight: Clustering reveals patterns in execution and test case counts, helping pinpoint outliers or areas for improvement.

Link : [Scatter plot for Number of executions vs Number of Test Case IDs | Tableau Public](#)

Calendar Chart for Execution Density

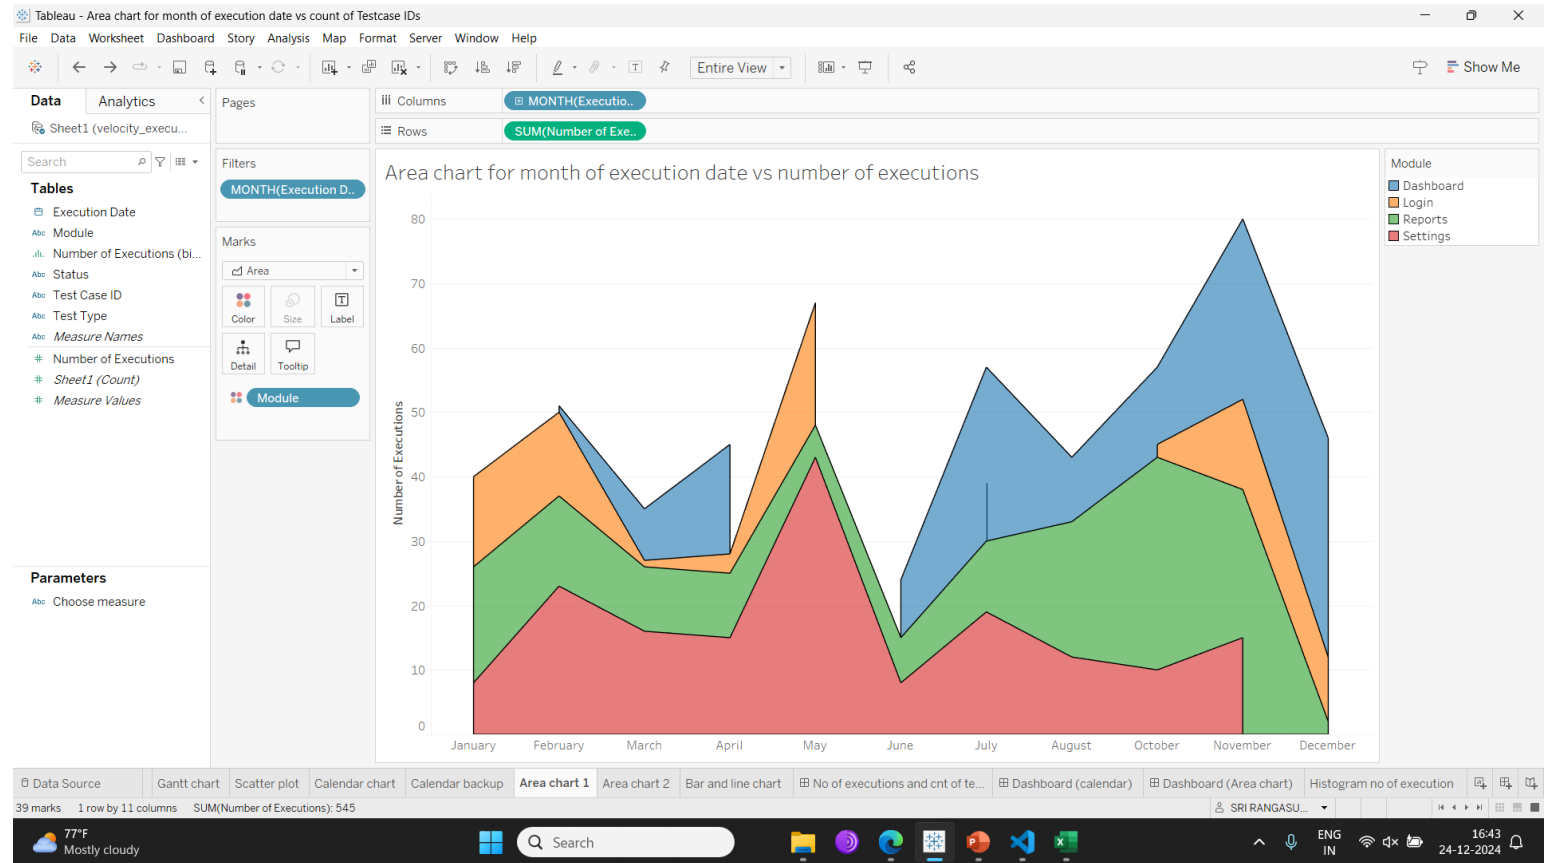

Calendar Chart for Execution Density

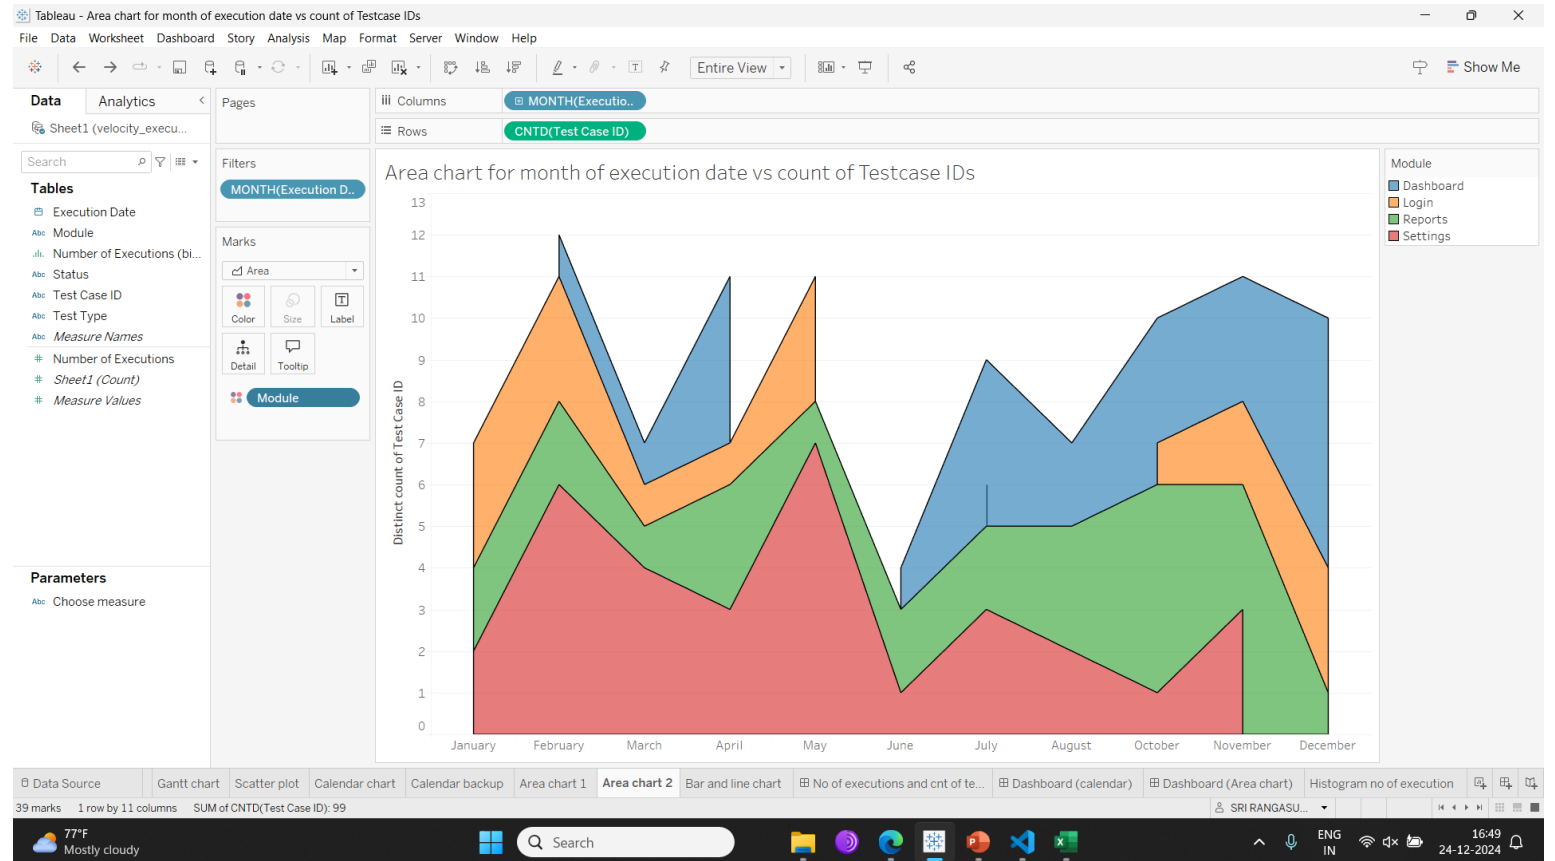

Insight : Weekly execution density uncovers peak testing days and highlights workload imbalances, aiding in schedule optimization.

Link : [Calendar chart for Testing team | Tableau Public](#)

Area Charts : Execution Trends by Module

Area Charts : Test Case Trends by Module

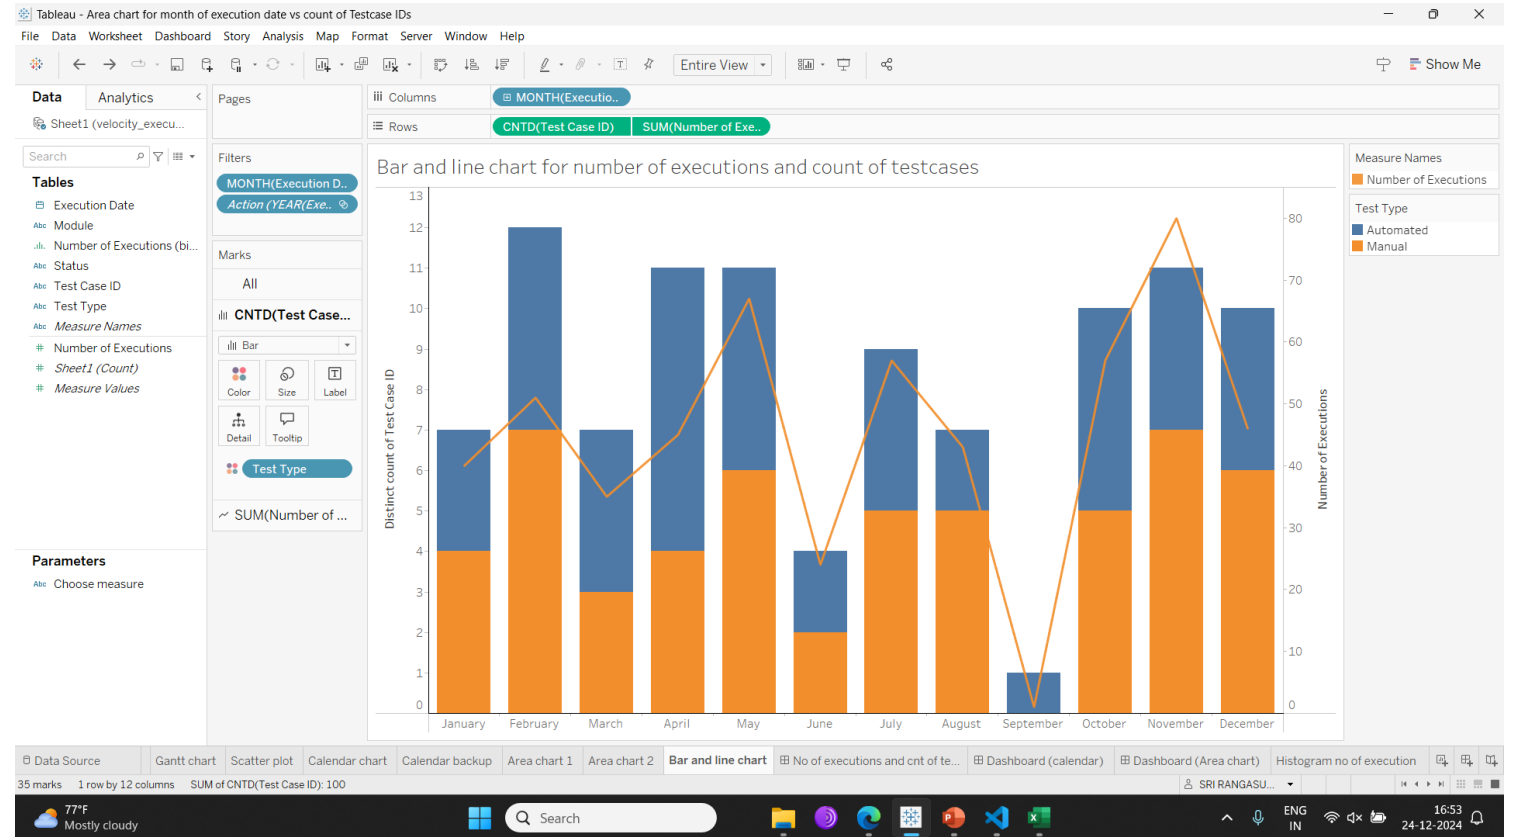

Area Charts : Dashboard

Insights : Execution and test case trends across modules provide a clear picture of monthly activity, helping identify high and low-performing modules.

Link : [Area chat for Testing team | Tableau Public](#)

Bar and Line Chart for Execution Analysis

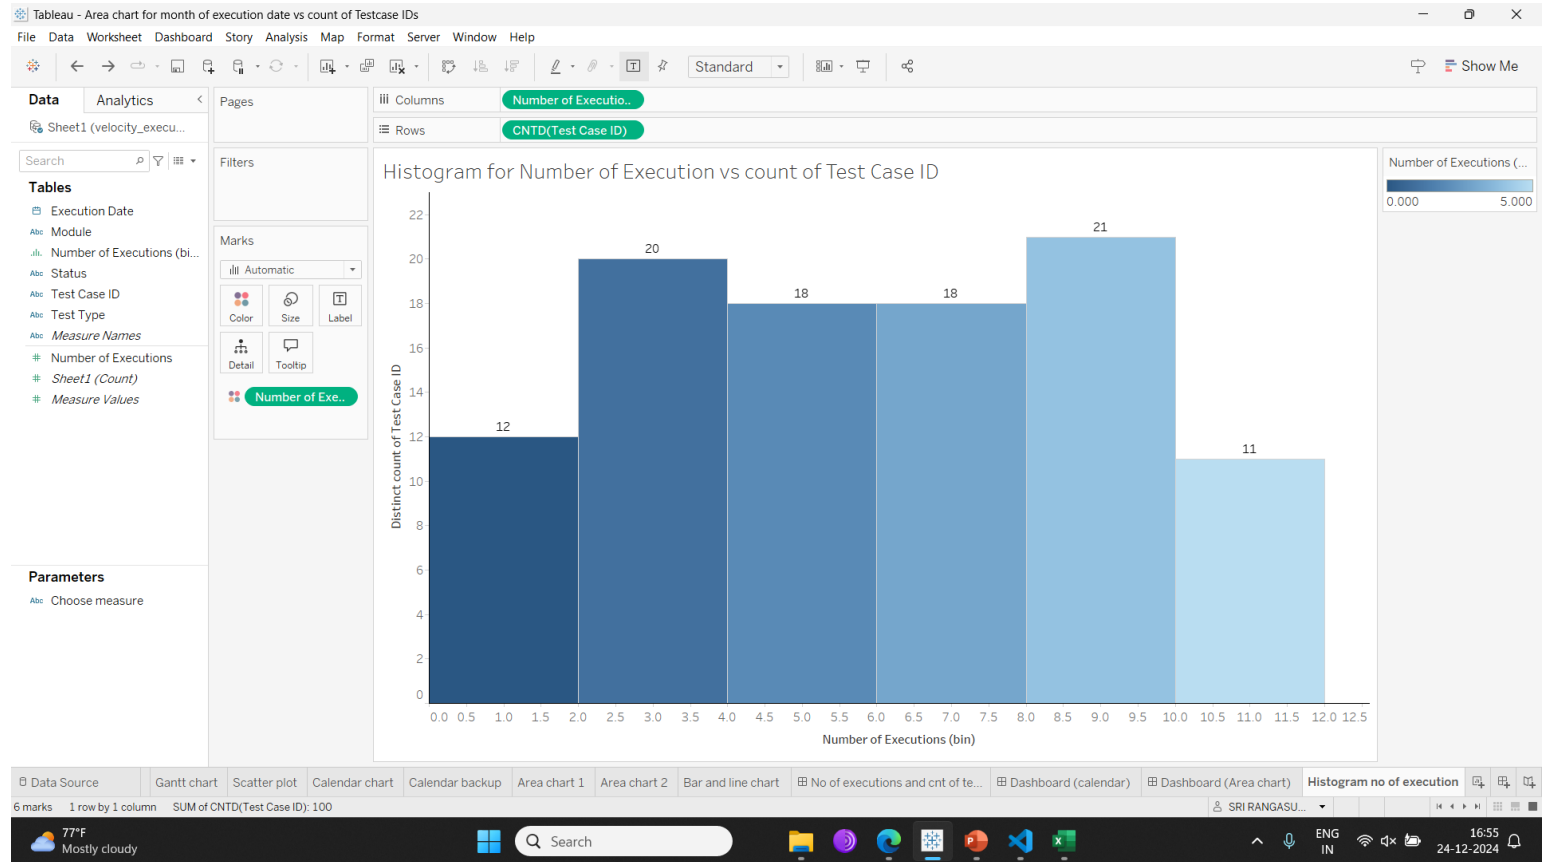

Bar and Line Chart for Execution Analysis

Insights : A combined view of manual vs. automated execution offers insights into test type trends, supporting decisions on automation efforts.

Link : [Bar and line chart for number of executions and count of testcases | Tableau Public](#)

Histogram for Execution Distribution

Histogram for Execution Distribution

Insights : The execution distribution chart highlights common activity ranges, guiding focus on high-density execution areas for optimization.

Link : [Histogram for Number of Execution vs Cnt of test case ids | Tableau Public](#)

Test Case ID vs Average Execution Time

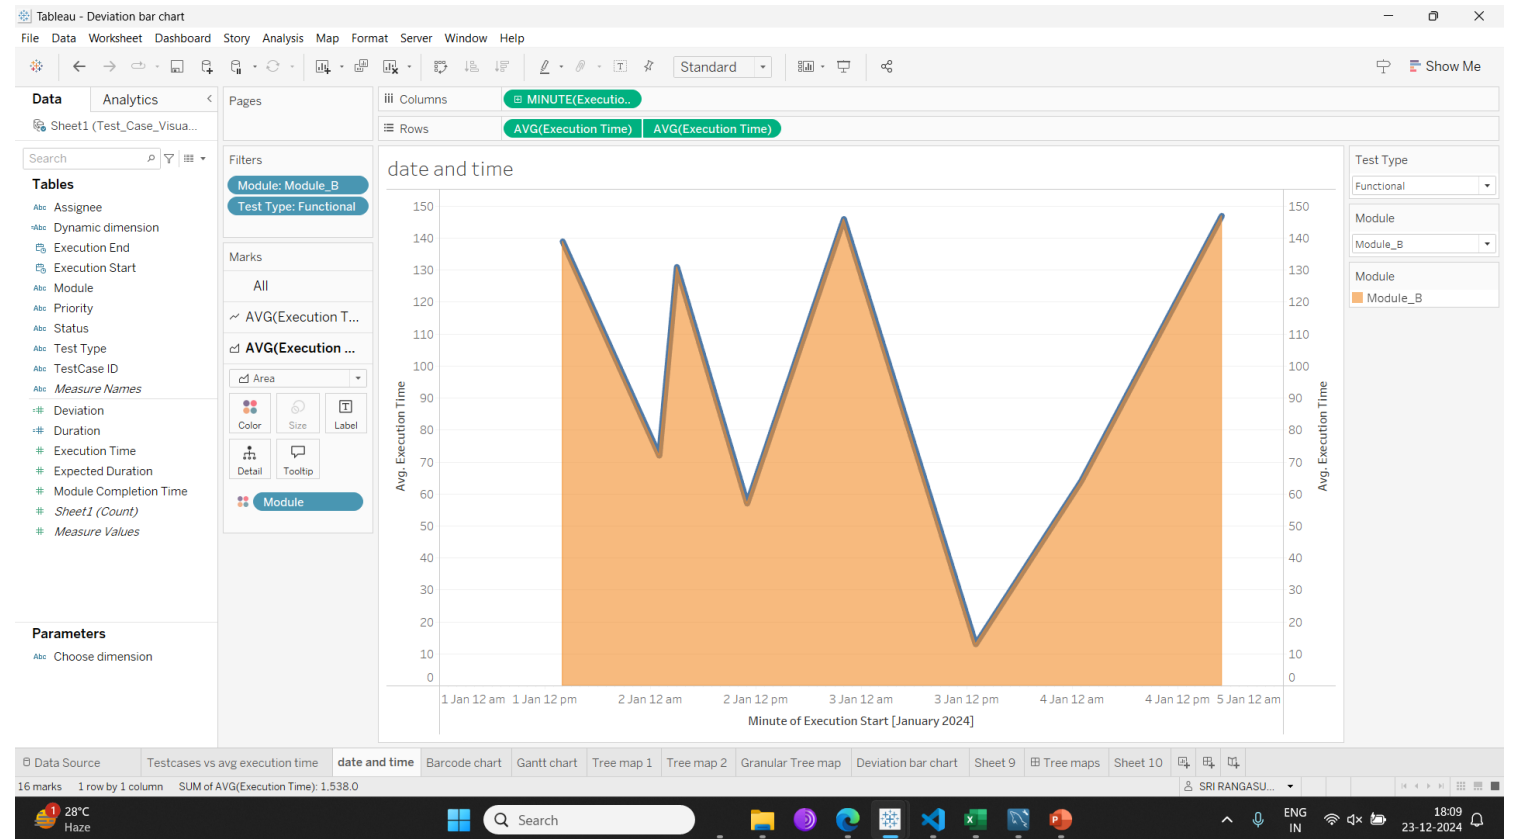

Test Case ID vs Average Execution Time

Insight: This chart helps identify test cases with the longest execution times. The color gradient allows quick identification of performance bottlenecks. Using filters enables slicing the data to focus on specific criteria like failed tests or high-priority modules.

Link: [Testcases vs execution time | Tableau Public](#)

Area Chart for Avg Execution Time vs Execution Start Date

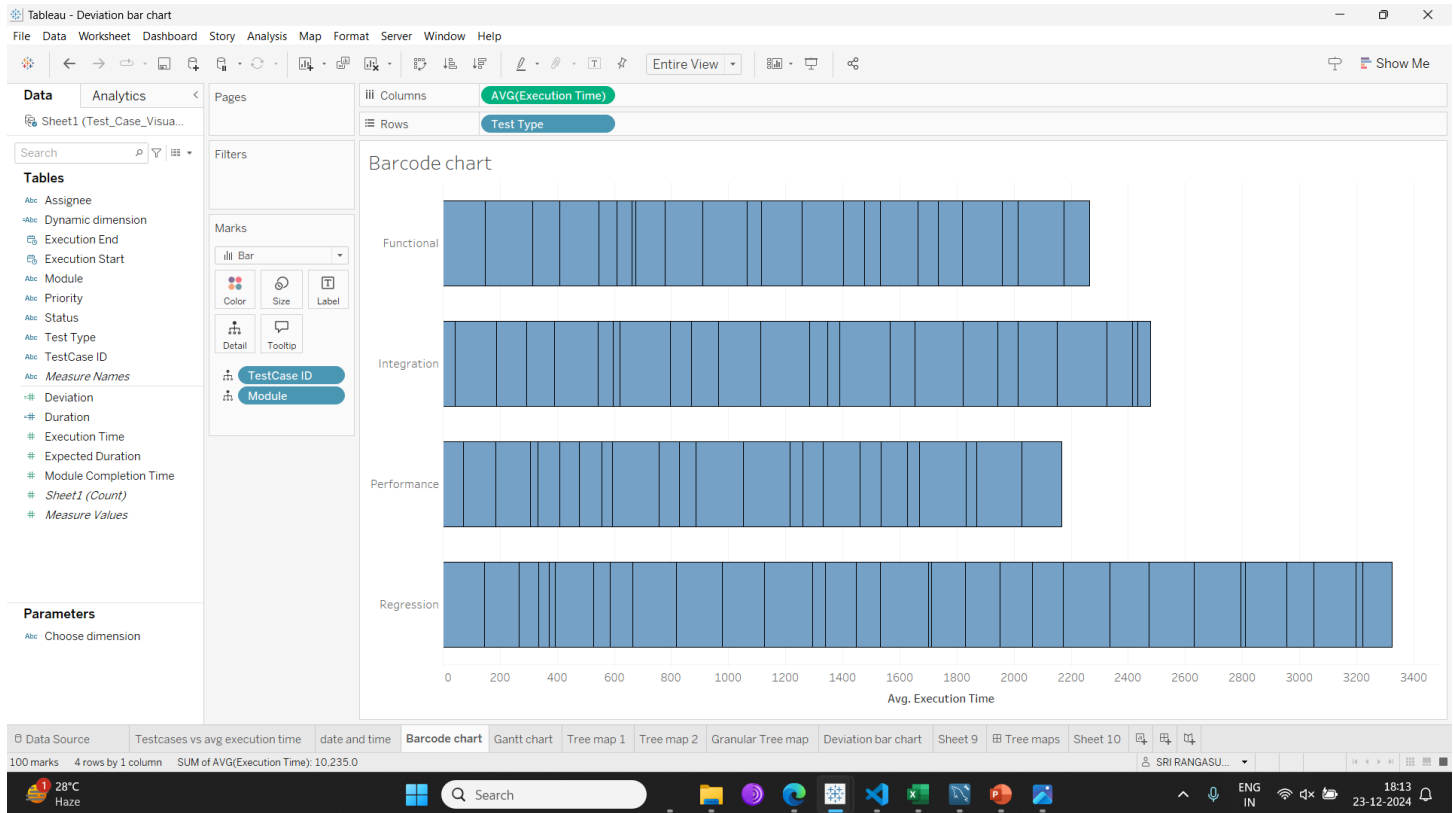

Area Chart for Avg Execution Time vs Execution Start Date

Insight: Visualizes trends in execution times over time, helping to identify seasonal spikes or trends. For example, you can determine if certain test types consistently take longer during specific periods.

Link : [Execution Time vs execution starting time \(Area chart\) | Tableau Public](#)

Barcode Chart: Avg Execution Time vs Test Type

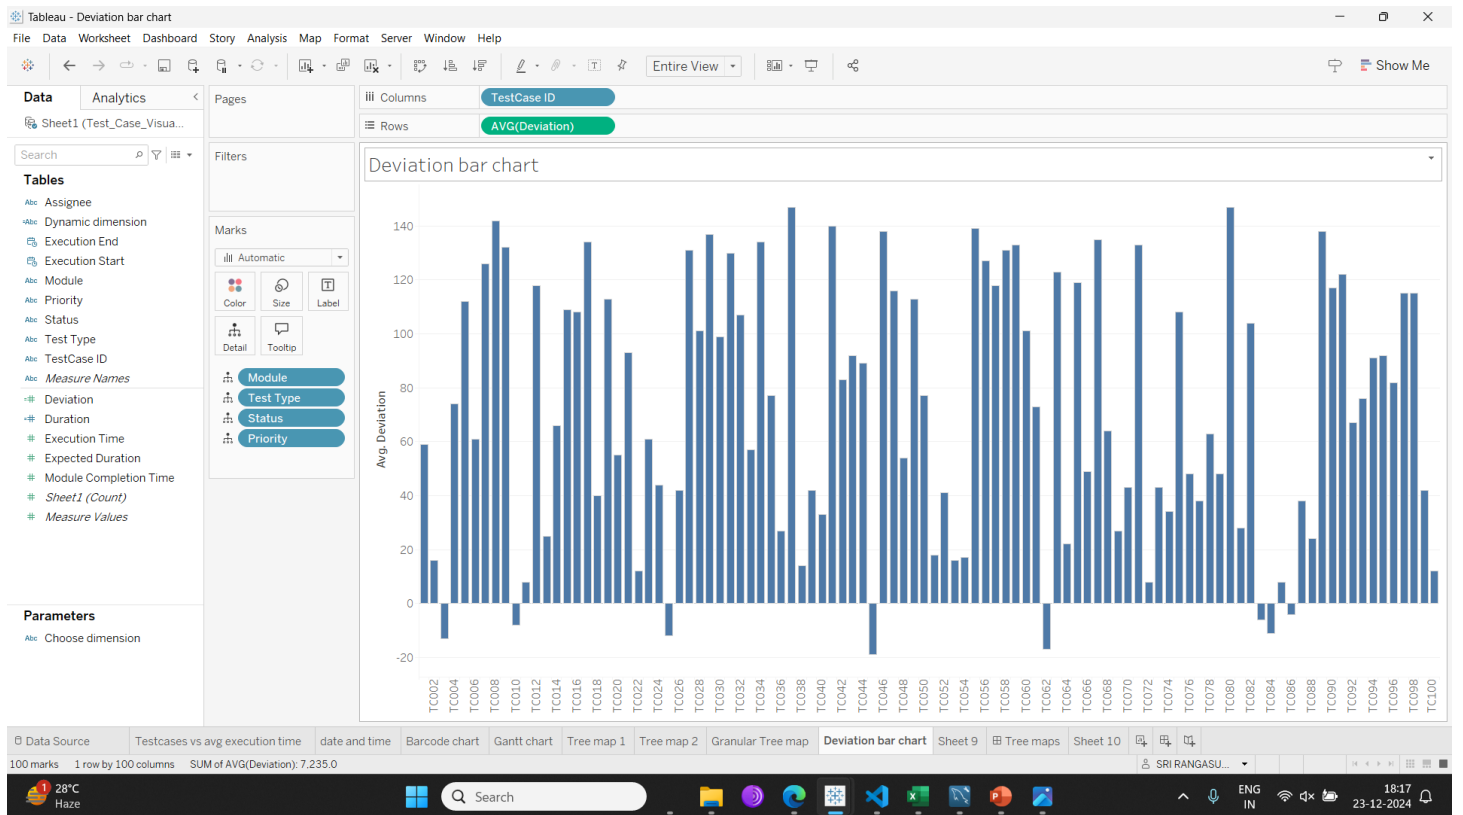

Barcode Chart: Avg Execution Time vs Test Type

Insight: Quickly spot variance within test types. Barcode charts reveal outliers and clusters where execution time deviates significantly for particular test cases.

Link : [Execution Time vs Test type \(Barcode chart\) | Tableau Public](#)

Deviation Bar Chart

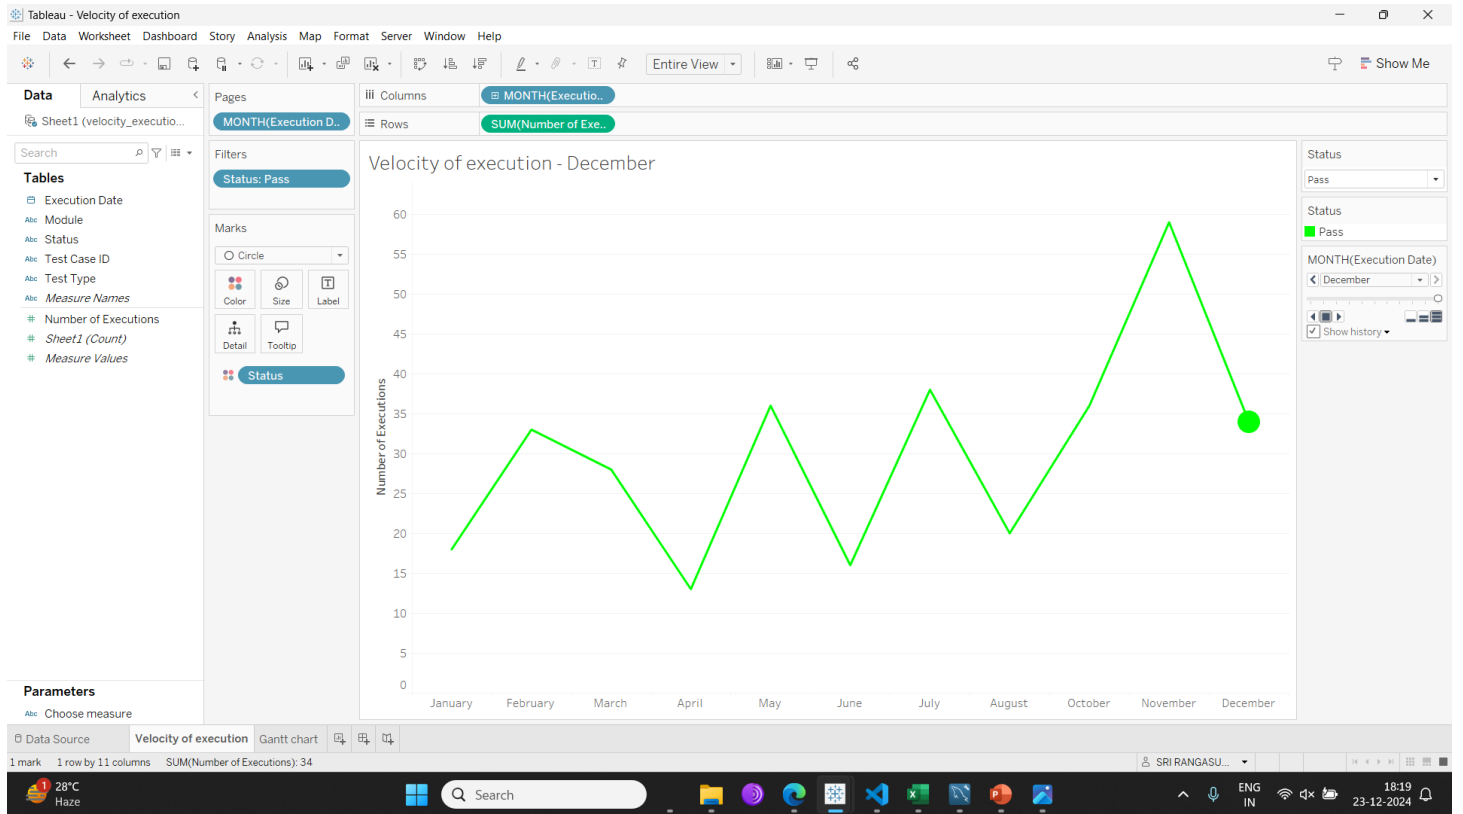

Deviation Bar Chart

Insight: Illustrates the impact of failed tests on execution time. Negative bars emphasize the disproportionate time spent on failures compared to successful executions.

Link : [Deviation bar chart | Tableau Public](#)

Velocity of Execution

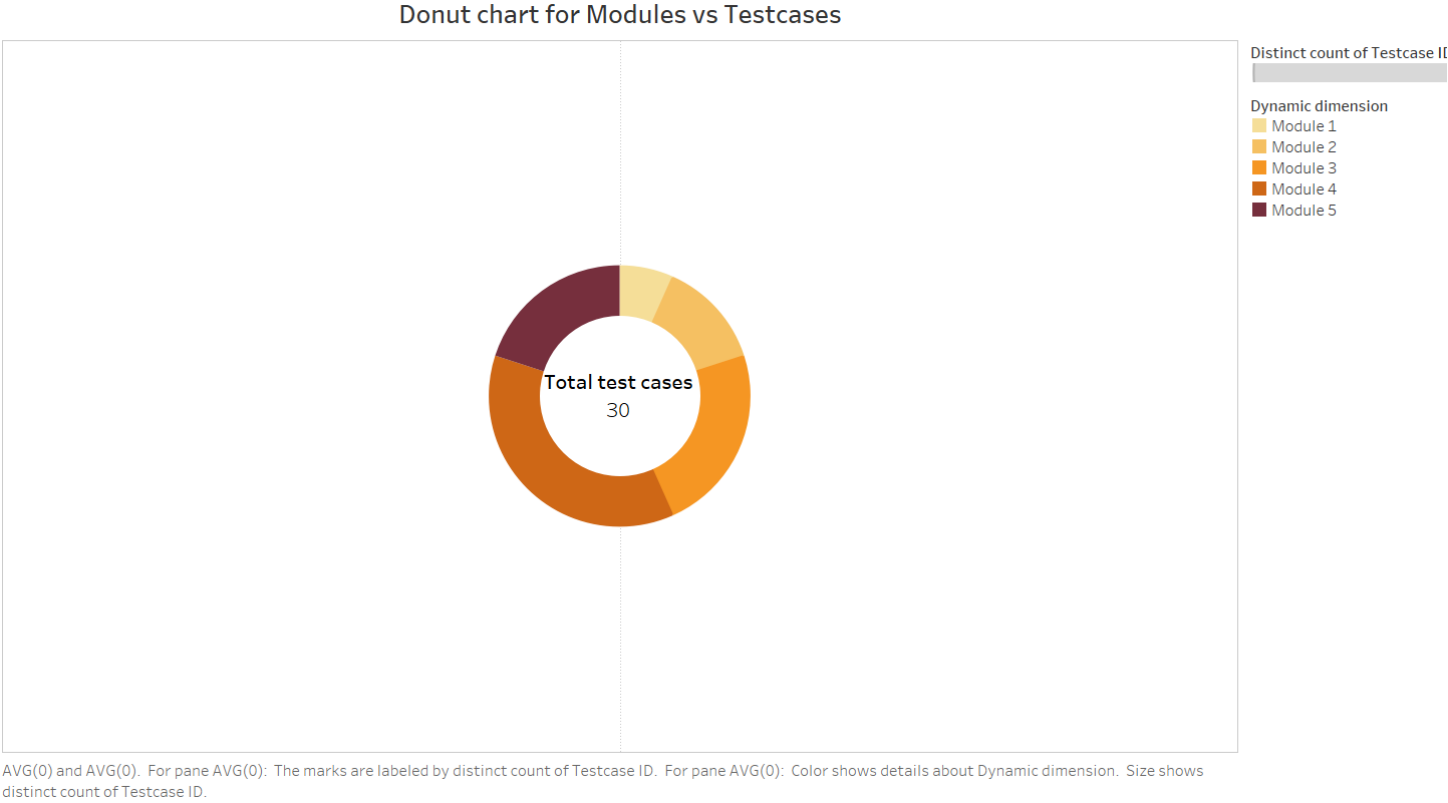

Velocity of Execution

Insight: Shows how execution velocity changes over time. The split between passed and failed tests highlights the efficiency of test execution and areas needing improvement.

Link : [Velocity of execution | Tableau Public](#)

Donut Chart

Donut Chart

Insights: Identify the distribution of workload or progress among various states or modules.

Link : [Donut chart for Dimesion vs Testcases | Tableau Public](#)

Box Plot

Box plot to find outlier in execution time

Median of Execution_mins for each Assignee. Details are shown for Test Type1, Testcase ID and Priority1.

Box Plot

Insights: Highlight areas where execution time deviates significantly, pinpointing areas for investigation.

Link : [Heat map based on Impact and Urgency | Tableau Public](#)

Heat map

Heat map

- Link : [Heat map based on Impact and Urgency | Tableau Public](#)

Bullet Chart

Bullet chart

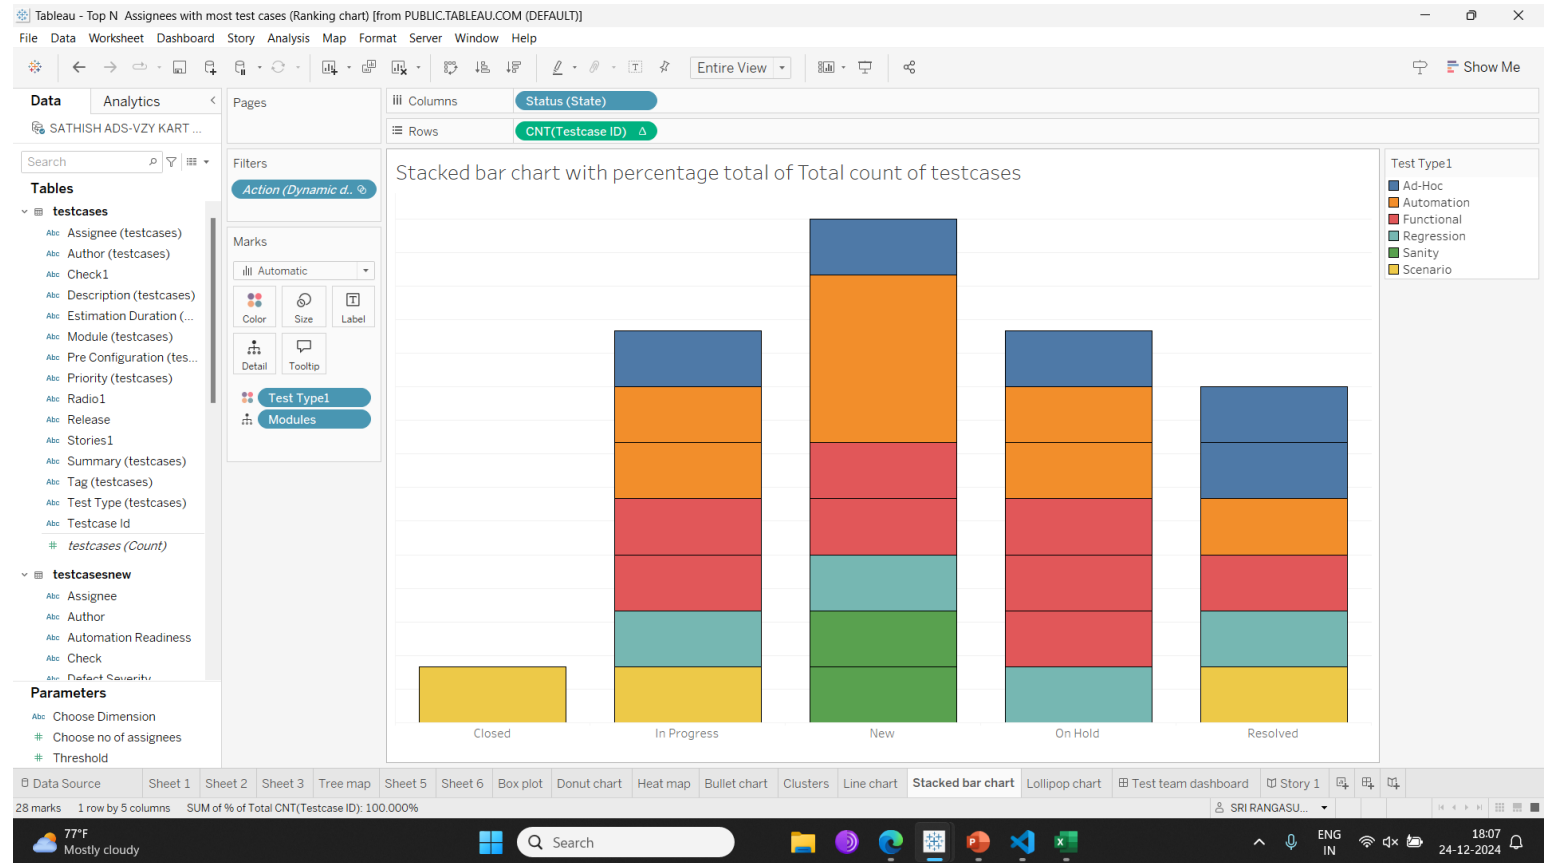

Average of Execution_mins for each Testcase ID. Color shows details about Dynamic dimension.

Bullet Chart

Insights: Identify test cases that exceed the acceptable execution time for targeted optimization.

Link : [Bullet chart | Tableau Public](#)

Stacked bar chart

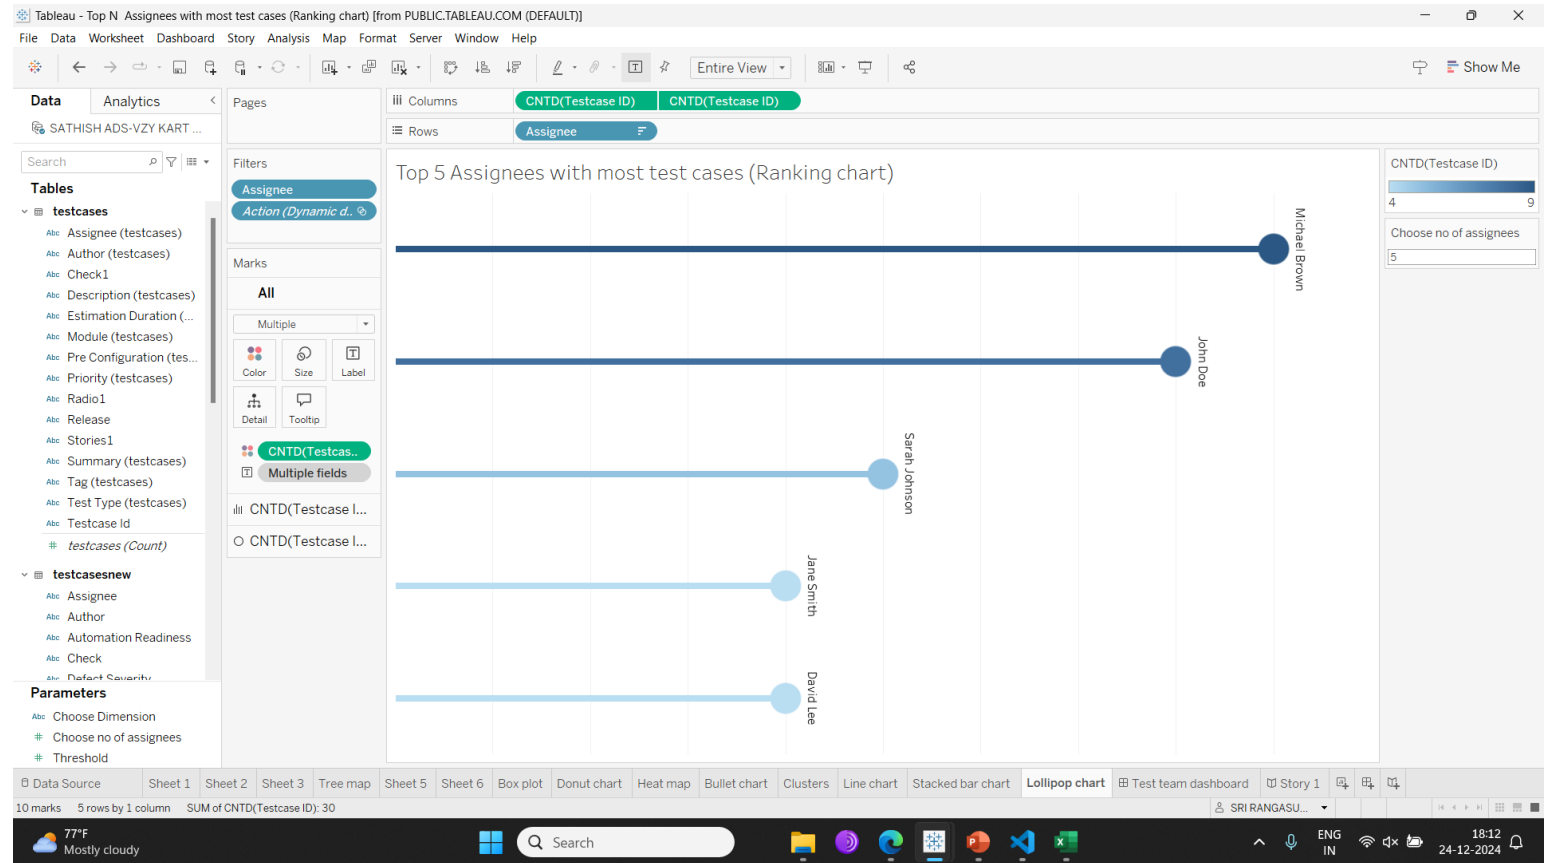

Stacked bar chart

Insights : Stacked bar chart with percentage total of Total count of testcases with color division by Test type

Link : [Stacked bar chart with percentage total of Total count of testcases | Tableau Public](#)

Lollipop chart

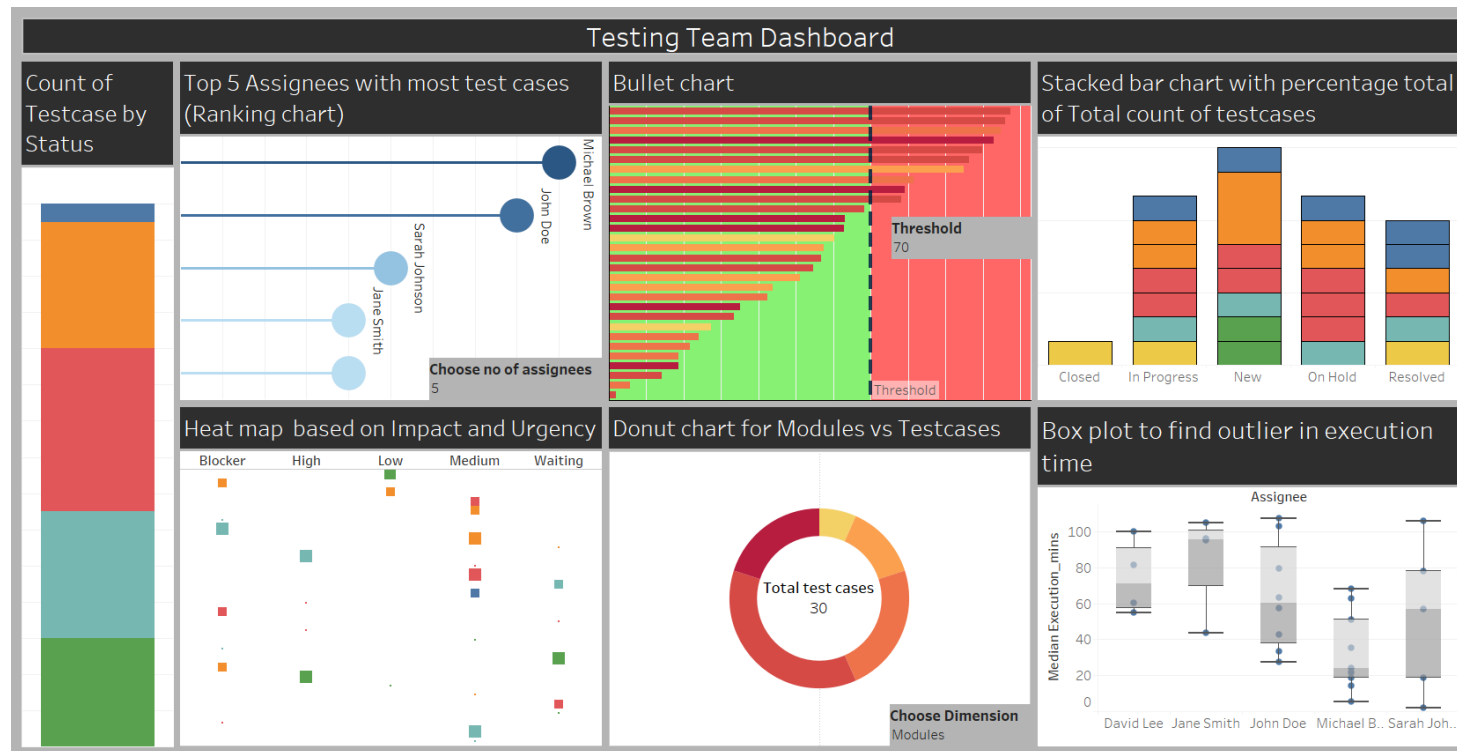

Lollipop chart

Insights : Top N Assignees with most test cases (Ranking chart) ,Where N is given by the user

Link : [Top N Assignees with most test cases \(Ranking chart\) | Tableau Public](#)
